

LAFFORT

l'œnologie par nature

LIST OF LAFFORT OENOLOGICAL PRODUCTS WHICH MAY CONTAIN ALLERGENS

(with reference to the attached list to Directive 2000/13/CE and its foreseen amendments)

Allergen designated by the Directive	LAFFORT Oenological products	Substance concerned
Eggs and egg-based products	Albucoll, Biocoll A Albumine d'Oeuf poudre Albumine d'Oeuf écailles Lysosym	Egg white
Milk and dairy products (lactose included)	Argilact, Polylact, Soluble Caseine, Casei Plus	Caseinate Acid casein

Remarks:

a) The aforementioned products are all clarifying agents used to flocculate in wine and are removed through racking and/or filtration.

b) Some oenological products contain sulphur dioxide with doses higher than the 10 mg/kg limit for allergenic products. However, the doses of sulphur dioxide that are typically introduced wine on usage of the product are significantly lowered due to product dilution when homogenised. These products are therefore not indicated in the aforementioned list.

c) None of our oenological products that we produce contain, or are likely to contain (through contamination), allergenic substances as defined in Appendix III bis to Directive 2003/89 modified by the Directive CE 2006/142 and modifying the Directive CE 2007/68.

d) In European Union, the mention of these products in the labelling of the wines is concerned from November 27, 2007. However wines put on the market or labelled before May 31, 2009, which satisfies the requirements of the directive 2005/26/CE (drawing up a list of substance or ingredients temporarily excluded from the appendix III bis of Directive 2000/13), can be marketed until exhaustion of stocks without this mention on the label.
